BÁNYAFA ÉS PILLÉRFÁ KÖBÜZŐ.

Összeállította: Mátravölgyi Nándor.

A bányafa és pillérfa feladásánál, illetve átvételénél sok hiba adódik a helytelen darabonkénti köbüzésből. Könyvem összeállításánál az a cél vezetett először, hogy a köbüzésből adódó hibákat megszüntessem, másodszor pedig az, hogy az átadónak, illetve átvévőnek ne kelljen méretenként és vastagsági csoportonként külön-külön a köbmétert kiszámolni, hanem egyszerű leolvasással meg lehessen azt állapítani. Szabvány előírás szerint méretenként és vastagsági csoportonként van összeállítva a köbüzőkönyv 20 m³-ig. Azért állítottam össze 20 m³-ig, mert figyelembe vettem a vagononkénti szállítást is. A köbüzőkönyv minden páratlan oszlopa a darabszámot, míg a páros oszlopa a m³-t tartalmazza.

Használata a következőképen történik:

Érkezik a fatelepre 2312 db. 1 m-es I. csoportú bányafa. A tárgymutatóban megkeresem az 1 m-es I-es csoportú bányafát és megállapítom, hogy az a 2251-2500 db. között van a 31. oldalon, ezt az oldalt fellepezem és leolvasom, hogy a 2312 darab bányafának köbtartalma 18.496 m³.

A köbüzőkönyv felhasználható vagononkénti feladásnál, átvételnél, tengelyen való fuvarozásnál, az Erdőgazdaságoknál a külső felvételezéseknél, konszignációk készítésénél és szám-lák ellenőrzésénél.-

Salgótarján, 1962. március hó.
